Bioelectrochemistry and Bioenergetics 48 (1999) 497–501

BIOELECTROCHEMISTRY AND BIOENERGETICS

Subject Index of Volume 48

Acetylcholine
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407
Actin filaments
Conditions for coherent vibrations in the cytoskeleton (Pokorný) 267
Activation energy
Free energy of charge transfer and intraprotein electric field: method of calculation depends on the charge state of protein at a given structure (Mertz, Krishtalik) 397
Adsorption of additives
Influence of additives on the protoplasts electrofusion (Jiang et al.) 447
L-Arginine decarboxylase
Interactions between carbonic anhydrase and some decarboxylating enzymes as studied by a new bioelectrochemical approach (Botrè, Mazzei) 463
ATR-FTIR
Hydration of phosphatidyl serine multilayers and its modulation by conformational change induced by correlated electrostatic interaction (Miller, Bach) 361

Bacteria
A model for the generation of low level chemiluminescence from microbiological growth media and its depletion by bacterial cells (Vogel, Süssmuth) 375
6B1 cells
Effects of ELF capacitively coupled weak electric fields on metabolism of 6B1 cells (Wang et al.) 369
Biological effects of magnetic field
Effects of sinusoidal magnetic field on adherence inhibition of leucocytes: preliminary results (Jandová et al.) 317
Biological order
Conditions for coherent vibrations in the cytoskeleton (Pokorný) 267
Biomembranes
Electromagnetic-field-induced oscillations of the lipid domain structures in the mixed membranes (Goltsov) 311
Biosensor
Real-time monitoring of enzymatic cleavage of nucleic acids using a quartz crystal microbalance (Wang et al.) 477
Biotechnology
Genetic programming as an analytical tool for non-linear dielectric spectroscopy (Woodward et al.) 389
Brain
Common model of evolution for living cell and central nervous system (Vvedensky) 343

Cancer treatment
Technical aspects of microwave thermotherapy (Vrba et al.) 305
Carbonic anhydrase
Interactions between carbonic anhydrase and some decarboxylating enzymes as studied by a new bioelectrochemical approach (Botrè, Mazzei) 463
Cavities
Quantum-mechanical coherence in cell microtubules: a realistic possibility? (Mavromatos) 273
Cell adherence inhibition
Effects of sinusoidal magnetic field on adherence inhibition of leucocytes: preliminary results (Jandová et al.) 317
Cell biology
Problems of weak electromagnetic field effects in cell biology (Berg) 355
Cell–cell interactions
Theoretical aspects of single pulse induced modulation of cell–cell interactions favoring iso-electrofusion (Biswas, Guha) 423
Cell-mediated immunity
Effects of sinusoidal magnetic field on adherence inhibition of leucocytes: preliminary results (Jandová et al.) 317
Cell-tissue electrofusion
Multiple-pulse-mediated electrofusion of intact erythrocyte onto human term placental amnion (Biswas, Guha) 431
Central nervous system
Common model of evolution for living cell and central nervous system (Vvedensky) 343
Channels
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407
Charybotoxin
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407
Coherence
Conditions for coherent vibrations in the cytoskeleton (Pokorný) 267
Computer simulation
Electroporation-mediated topical delivery of vitamin C for cosmetic applications (Zhang et al.) 453
Conductivity
Examination of the relationship between parameters to determine electropermeability of *Saccharomyces cerevisiae* (Muraji et al.) 485
Coulomb interaction
Peculiarities of long-range interaction between the nucleotides after DNA damage (Pinchuk, Vysotskii) 329
Cream
Electroporation-mediated topical delivery of vitamin C for cosmetic applications (Zhang et al.) 453
Crystal suspension
Electroporation-mediated topical delivery of vitamin C for cosmetic applications (Zhang et al.) 453

Culture media
A model for the generation of low level chemiluminescence from microbiological growth media and its depletion by bacterial cells (Vogel, Süssmuth) 375
Cyclic voltammetry
Unmodified supported thiol/lipid bilayers: studies of structural disorder and conducting mechanism by cyclic voltammetry and AC impedance (Diao et al.) 469
Cystic fibrosis
Detection of the ΔF508 mutation in the CFTR gene by means of time-resolved fluorescence methods (Kirschstein et al.) 415
Cytoskeleton
Conditions for coherent vibrations in the cytoskeleton (Pokorný) 267

Depolymerization
Microtubules: strange polymers inside the cell (Bolterauer et al.) 285
Diamino oxidase
Interactions between carbonic anhydrase and some decarboxylating enzymes as studied by a new bioelectrochemical approach (Botrè, Mazzei) 463
Dichroic ratio
Hydration of phosphatidyl serine multilayers and its modulation by conformational change induced by correlated electrostatic interaction (Miller, Bach) 361
Dielectric polarization, optical and static
Free energy of charge transfer and intraprotein electric field: method of calculation depends on the charge state of protein at a given structure (Mertz, Krishtalik) 397
Dielectric spectroscopy
Genetic programming as an analytical tool for non-linear dielectric spectroscopy (Woodward et al.) 389
Difference spectra
Hydration of phosphatidyl serine multilayers and its modulation by conformational change induced by correlated electrostatic interaction (Miller, Bach) 361
DNA
Nonlinear dynamics of a DNA chain affected by endogenous AC fields (Satarić, Zdravković) 325
DNA cleavage
Real-time monitoring of enzymatic cleavage of nucleic acids using a quartz crystal microbalance (Wang et al.) 477
Double break of DNA helix
Peculiarities of long-range interaction between the nucleotides after DNA damage (Pinchuk, Vysotskii) 329

Efficiency
Reasons of poor replicability of nonthermal bioeffects by millimeter waves (Chukova) 349
Electrical stimulation
Low frequency alternating electric fields inhibit lactose uptake in *Kluyveromyces marxianus* (Zrimec et al.) 481
Electrical window
Problems of weak electromagnetic field effects in cell biology (Berg) 355
Electric field
Free energy of charge transfer and intraprotein electric field: method of calculation depends on the charge state of protein at a given structure (Mertz, Krishtalik) 397
Electrochemical impedance spectroscopy
Unmodified supported thiol/lipid bilayers: studies of structural disorder and conducting mechanism by cyclic voltammetry and AC impedance (Diao et al.) 469
Electrofusion
Membrane microextension: a possible mechanism for establishing molecular contact in electrofusion (Biswas, Guha) 435
Influence of additives on the protoplasts electrofusion (Jiang et al.) 447
Electromagnetic field effects
Problems of weak electromagnetic field effects in cell biology (Berg) 355
Electron irradiation
Pore resealing inactivation in electroporated erythrocyte membrane irradiated with electrons (Neamtu et al.) 441
Electron transfer
Free energy of charge transfer and intraprotein electric field: method of calculation depends on the charge state of protein at a given structure (Mertz, Krishtalik) 397
Electron tunneling
Influence of a periodic field on the distant electron transfer in biological systems (Petrov) 333
Unmodified supported thiol/lipid bilayers: studies of structural disorder and conducting mechanism by cyclic voltammetry and AC impedance (Diao et al.) 469
Electropermeation
Examination of the relationship between parameters to determine electropermeability of *Saccharomyces cerevisiae* (Muraji et al.) 485
Electroporation
Pore resealing inactivation in electroporated erythrocyte membrane irradiated with electrons (Neamtu et al.) 441
Examination of the relationship between parameters to determine electropermeability of *Saccharomyces cerevisiae* (Muraji et al.) 485
Electroporation-mediated topical delivery
Electroporation-mediated topical delivery of vitamin C for cosmetic applications (Zhang et al.) 453
Electrostatic interaction
Free energy of charge transfer and intraprotein electric field: method of calculation depends on the charge state of protein at a given structure (Mertz, Krishtalik) 397
Endergonic process
Reasons of poor replicability of nonthermal bioeffects by millimeter waves (Chukova) 349
Endogenous AC fields
Nonlinear dynamics of a DNA chain affected by endogenous AC fields (Satarić, Zdravković) 325
Energy transfer
Quantum-mechanical coherence in cell microtubules: a realistic possibility? (Mavromatos) 273
Escherichia coli
High magnetic field enhances stationary phase-specific transcription activity of *Escherichia coli* (Tsuchiya et al.) 383
Evolution
Common model of evolution for living cell and central nervous system (Vvedensky) 343
Exergonic process
Reasons of poor replicability of nonthermal bioeffects by millimeter waves (Chukova) 349
External electromagnetic field
Electromagnetic-field-induced oscillations of the lipid domain structures in the mixed membranes (Goltsov) 311

Fermentation
Genetic programming as an analytical tool for non-linear dielectric spectroscopy (Woodward et al.) 389

Field strength
Examination of the relationship between parameters to determine electropermeability of *Saccharomyces cerevisiae* (Muraji et al.) 485
Fluctuational openings
Nonlinear dynamics of a DNA chain affected by endogenous AC fields (Satarić, Zdravković) 325
Fluorescence lifetime
Detection of the ΔF508 mutation in the CFTR gene by means of time-resolved fluorescence methods (Kirschstein et al.) 415
Fröhlich coherence
Conditions for coherent vibrations in the cytoskeleton (Pokorný) 267
Fröhlich's fields
Nonlinear dynamics of a DNA chain affected by endogenous AC fields (Satarić, Zdravković) 325
Fröhlichs theory
Elementary arguments that the Wu–Austin Hamiltonian has no finite ground state (the search for a microscopic foundation of Fröhlichs theory) (Bolterauer) 301

Genetic programming
Genetic programming as an analytical tool for non-linear dielectric spectroscopy (Woodward et al.) 389
Glibenclamide
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407
Graft tissue
Multiple-pulse-mediated electrofusion of intact erythrocyte onto human term placental amnion (Biswas, Guha) 431

HBs-Ab
Effects of ELF capacitively coupled weak electric fields on metabolism of 6B1 cells (Wang et al.) 369
H^+/lactose symporter
Low frequency alternating electric fields inhibit lactose uptake in *Kluyveromyces marxianus* (Zrimec et al.) 481
Human placenta
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407
Hybridization
Real-time monitoring of enzymatic cleavage of nucleic acids using a quartz crystal microbalance (Wang et al.) 477
Hydration
Hydration of phosphatidyl serine multilayers and its modulation by conformational change induced by correlated electrostatic interaction (Miller, Bach) 361
Detection of the ΔF508 mutation in the CFTR gene by means of time-resolved fluorescence methods (Kirschstein et al.) 415
Hyperthermia
Technical aspects of microwave thermotherapy (Vrba et al.) 305

Inhomogeneous high magnetic field
High magnetic field enhances stationary phase-specific transcription activity of *Escherichia coli* (Tsuchiya et al.) 383
Iontophoresis
Electroporation-mediated topical delivery of vitamin C for cosmetic applications (Zhang et al.) 453
Iso-electrofusion
Theoretical aspects of single pulse induced modulation of cell–cell interactions favoring iso-electrofusion (Biswas, Guha) 423
Isoproterenol
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407

Kramers–Kroning analysis
Peculiarities of long-range interaction between the nucleotides after DNA damage (Pinchuk, Vysotskii) 329
Kubo's response theory
Nonlinear dynamics of a DNA chain affected by endogenous AC fields (Satarić, Zdravković) 325

Living cell
Common model of evolution for living cell and central nervous system (Vvedensky) 343
L-Lysine decarboxylase
Interactions between carbonic anhydrase and some decarboxylating enzymes as studied by a new bioelectrochemical approach (Botrè, Mazzei) 463

Maillard reaction
A model for the generation of low level chemiluminescence from microbiological growth media and its depletion by bacterial cells (Vogel, Süssmuth) 375
Membrane bump
Membrane microextension: a possible mechanism for establishing molecular contact in electrofusion (Biswas, Guha) 435
Membrane contact
Membrane microextension: a possible mechanism for establishing molecular contact in electrofusion (Biswas, Guha) 435
Membrane microextension
Membrane microextension: a possible mechanism for establishing molecular contact in electrofusion (Biswas, Guha) 435
Membrane potential
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407
Microtubules
Conditions for coherent vibrations in the cytoskeleton (Pokorný) 267
Quantum-mechanical coherence in cell microtubules: a realistic possibility? (Mavromatos) 273
Microtubules: strange polymers inside the cell (Bolterauer et al.) 285
Microtubules electromagnetic activity
Microelectronic sensors for measurement of electromagnetic fields of living cells and experimental results (Jelínek et al.) 261
Microvilli
Multiple-pulse-mediated electrofusion of intact erythrocyte onto human term placental amnion (Biswas, Guha) 431
Microwave applicators
Technical aspects of microwave thermotherapy (Vrba et al.) 305
Microwave thermotherapy
Technical aspects of microwave thermotherapy (Vrba et al.) 305
Model cell surface
Theoretical aspects of single pulse induced modulation of cell–cell interactions favoring iso-electrofusion (Biswas, Guha) 423
Morphological perturbation
Membrane microextension: a possible mechanism for establishing molecular contact in electrofusion (Biswas, Guha) 435
M phase
Microelectronic sensors for measurement of electromagnetic fields of living cells and experimental results (Jelínek et al.) 261

Multivariate calibration
Genetic programming as an analytical tool for non-linear dielectric spectroscopy (Woodward et al.) 389
Neural network
Common model of evolution for living cell and central nervous system (Vvedensky) 343

Nifedipine
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407
Non-linear
Genetic programming as an analytical tool for non-linear dielectric spectroscopy (Woodward et al.) 389
Nucleases
Real-time monitoring of enzymatic cleavage of nucleic acids using a quartz crystal microbalance (Wang et al.) 477
Octadecyl mercaptan
Unmodified supported thiol/lipid bilayers: studies of structural disorder and conducting mechanism by cyclic voltammetry and AC impedance (Diao et al.) 469
L-Ornithine decarboxylase
Interactions between carbonic anhydrase and some decarboxylating enzymes as studied by a new bioelectrochemical approach (Botrè, Mazzei) 463

Percolation structure
Electromagnetic-field-induced oscillations of the lipid domain structures in the mixed membranes (Goltsov) 311
Periodic field
Influence of a periodic field on the distant electron transfer in biological systems (Petrov) 333
Perturbation expansion
Elementary arguments that the Wu–Austin Hamiltonian has no finite ground state (the search for a microscopic foundation of Fröhlichs theory) (Bolterauer) 301
Phosphatidylcholine
Unmodified supported thiol/lipid bilayers: studies of structural disorder and conducting mechanism by cyclic voltammetry and AC impedance (Diao et al.) 469
Phospholipid multibilayers
Hydration of phosphatidyl serine multilayers and its modulation by conformational change induced by correlated electrostatic interaction (Miller, Bach) 361
Placental amnion
Multiple-pulse-mediated electrofusion of intact erythrocyte onto human term placental amnion (Biswas, Guha) 431
Plant tissue electrodes
Interactions between carbonic anhydrase and some decarboxylating enzymes as studied by a new bioelectrochemical approach (Botrè, Mazzei) 463
Point mutation
Detection of the ΔF508 mutation in the CFTR gene by means of time-resolved fluorescence methods (Kirschstein et al.) 415
Polarised spectra
Hydration of phosphatidyl serine multilayers and its modulation by conformational change induced by correlated electrostatic interaction (Miller, Bach) 361
Polymerization
Microtubules: strange polymers inside the cell (Bolterauer et al.) 285
Pores resealing
Pore resealing inactivation in electroporated erythrocyte membrane irradiated with electrons (Neamtu et al.) 441

Proteins, electrostatics of
Free energy of charge transfer and intraprotein electric field: method of calculation depends on the charge state of protein at a given structure (Mertz, Krishtalik) 397
Pulse width
Examination of the relationship between parameters to determine electropermeability of *Saccharomyces cerevisiae* (Muraji et al.) 485

Quantum coherence
Quantum-mechanical coherence in cell microtubules: a realistic possibility? (Mavromatos) 273
Quartz crystal microbalance
Real-time monitoring of enzymatic cleavage of nucleic acids using a quartz crystal microbalance (Wang et al.) 477

Reactive oxygen species
A model for the generation of low level chemiluminescence from microbiological growth media and its depletion by bacterial cells (Vogel, Süssmuth) 375
RNA polymerase
High magnetic field enhances stationary phase-specific transcription activity of *Escherichia coli* (Tsuchiya et al.) 383
rpoS
High magnetic field enhances stationary phase-specific transcription activity of *Escherichia coli* (Tsuchiya et al.) 383

Saccharomyces cerevisiae
Microelectronic sensors for measurement of electromagnetic fields of living cells and experimental results (Jelínek et al.) 261
Examination of the relationship between parameters to determine electropermeability of *Saccharomyces cerevisiae* (Muraji et al.) 485
Serotonin
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407
σ factor
High magnetic field enhances stationary phase-specific transcription activity of *Escherichia coli* (Tsuchiya et al.) 383
Skin
Electroporation-mediated topical delivery of vitamin C for cosmetic applications (Zhang et al.) 453
Skin aging
Electroporation-mediated topical delivery of vitamin C for cosmetic applications (Zhang et al.) 453
Smooth muscle cells
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407
Supported thiol/lipid bilayer
Unmodified supported thiol/lipid bilayers: studies of structural disorder and conducting mechanism by cyclic voltammetry and AC impedance (Diao et al.) 469
Surface active substances
Influence of additives on the protoplasts electrofusion (Jiang et al.) 447

Target analysis
Pore resealing inactivation in electroporated erythrocyte membrane irradiated with electrons (Neamtu et al.) 441
Thermodynamics of irreversible processes
Reasons of poor replicability of nonthermal bioeffects by millimeter waves (Chukova) 349
Transfer rates
Influence of a periodic field on the distant electron transfer in biological systems (Petrov) 333

Van der Waals interaction
Peculiarities of long-range interaction between the nucleotides after DNA damage (Pinchuk, Vysotskii) 329
Vessels
Calcium channels, potassium channels and membrane potential of smooth muscle cells of human allantochorial placental vessels (Guiet-Bara et al.) 407
Vitamin C
Electroporation-mediated topical delivery of vitamin C for cosmetic applications (Zhang et al.) 453
Wu–Austin Hamiltonian
Elementary arguments that the Wu–Austin Hamiltonian has no finite ground state (the search for a microscopic foundation of Fröhlichs theory) (Bolterauer) 301
Yeast
Low frequency alternating electric fields inhibit lactose uptake in *Kluyveromyces marxianus* (Zrimec et al.) 481
